

Health Home Implications for Justice-Involved Populations

Health Homes might include the following performance metric indicators for plan enrollees with justice involvement in order to prevent the unintended consequence of increased incarceration rates.

1. Potentially Preventable Re-incarceration: Health Homes, through care coordination, will reduce the percentage of enrollees with SMI experiencing re-incarceration as follows:
 - Months 1- 6: develop baseline of group
 - Months 6 - 12: 1% reduction in re-incarceration
 - Year 2: 2% reduction in re-incarceration
2. Health Homes, through care coordination and transition planning, will reduce the length of stay (LOS) for those enrollees with SMI experiencing incarceration by 20%.
Data required for this measure: NYC Department of Correction: Demographic, date of admission and date of release from city jail
3. Health Homes will report on the percentage of formerly jailed enrollees with SMI who had an outpatient visit, intensive outpatient encounter or a partial hospitalization with a behavioral health provider within 7 days and within 30 days of release.
